

# Rewards System

A Shopify + Laravel loyalty programme.  
Earn from real store events. Redeem real checkout codes.

[Portal](#) · [Admin](#) · [Shopify connection](#) · [Birthday](#) · [Newsletter](#) · [Redeem](#)

Confidential · For store operators

## 01 — OVERVIEW

---

# What this application does

Laravel keeps the points ledger. Shopify remains the shop.  
Customers earn from real store events and spend on real discount codes.

# Who uses which screen

Shoppers use the Portal (/): look up email, save birthday, redeem.

You use Admin: reports, customer ledger, rewards catalogue, Shopify settings.

Shopify stays the place orders are paid and codes are used at checkout.

Customer email is the join key between the shop and the ledger.

**Rewards Portal**  
 Earn points. Use your discount code at checkout.

Portal Reports

**REWARDS SYSTEM**  
**Earn points from Shopify. Spend them on real rewards.**  
 2 points per £1 paid after discounts (14-day hold). 200 for creating an account, 100 for a genuine newsletter opt-in, 250 on your birthday each year. Spend 100 points = £1.  
 1. Look up your email 2. Earn from real Shopify events  
 3. Redeem a Shopify code or gift card  
 Shopify Admin API demo mode (no live token)

# How points are earned

Purchase: 2 points per £1 paid after discounts, held 14 days.

Account: 200 points once (customers/create).

Newsletter: 100 points once on a genuine Shopify subscribe.

Birthday: 250 points once per year from a date the customer provides.

No admin buttons to invent earn events.

REWARDS SYSTEM

## Rewards

Points-based loyalty for the Shopify store. Spend rate: 100 points = £1. Every redemption creates a real Shopify discount code or gift card through the Admin API.

### Section 1 — Earning points

Points are awarded from real Shopify webhooks only. There are no manual earn buttons.

| Action            | Points awarded        | Conditions                                                                                                                |
|-------------------|-----------------------|---------------------------------------------------------------------------------------------------------------------------|
| Make a purchase   | 2 points per £1 spent | Calculated on the amount actually paid after discounts. Points are subject to a 14-day hold before they become spendable. |
| Create an account | 200 points            | One-time only, per customer.                                                                                              |
| Newsletter signup | 100 points            | One-time only. Awarded only on a genuine opt-in, and not on every profile save.                                           |
| Birthday          | 250 points            | Once per calendar year, based on a date the customer provides.                                                            |

### Section 2 — Spending points

The conversion rate for spending is 100 points to £1. Customers redeem accumulated points for these rewards.

| Reward            | Points required | Description                                                                                                       | Shopify object                                              |
|-------------------|-----------------|-------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| Free shipping     | 500 points      | Waives the shipping charge on the customer's next order.                                                          | discountCodeFreeShippingCreate                              |
| Money off (small) | 500 points      | £5 off the customer's next order.                                                                                 | discountCodeBasicCreate (£5)                                |
| Free product      | 1,500 points    | The customer selects one item from a curated collection of eligible products. Shipping is still charged normally. | discountCodeBasicCreate (100% off verified collection item) |
| Gift card         | 2,500 points    | A £25 store gift card.                                                                                            | giftCardCreate (£25)                                        |

Every balance is the sum of ledger rows. Discount codes and gift cards are created in Shopify on redeem.

# How points are spent

- 100 points = £1.
- 500 → £5 off or free shipping. 1,500 → free product (collection check). 2,500 → £25 gift card.
- Held purchase points cannot be spent yet. Bonus points can.
- Redeem creates a real Shopify discount or gift card, then deducts points.

Rewards card loaded.

Points are awarded only from Shopify webhooks. Redeem on this portal to create a real checkout code or gift card.

Show my points. Spendable is redeemable now. Held purchase points wait 14 days.

Rewards System · Operator manual

08 / 20

# Step 3 · Save a birthday

Skip Checkout Profile Add block — it will not show custom.birthday.

Webhooks omit metafields, so Admin metafield save does not award points by itself.

Portal: enter email + date → Save birthday. If today matches, 250 points once this year.

Or Admin → that customer → Save birthday. Lookup also reads custom.birthday via GraphQL.

Rewards Portal

Earn points. Use your discount code at checkout.

Save birthday

Last birthday reward year: 2026

Correction

Use only to fix a ledger error. Earning still comes from Shopify webhooks.

Points (negative to remove)

0

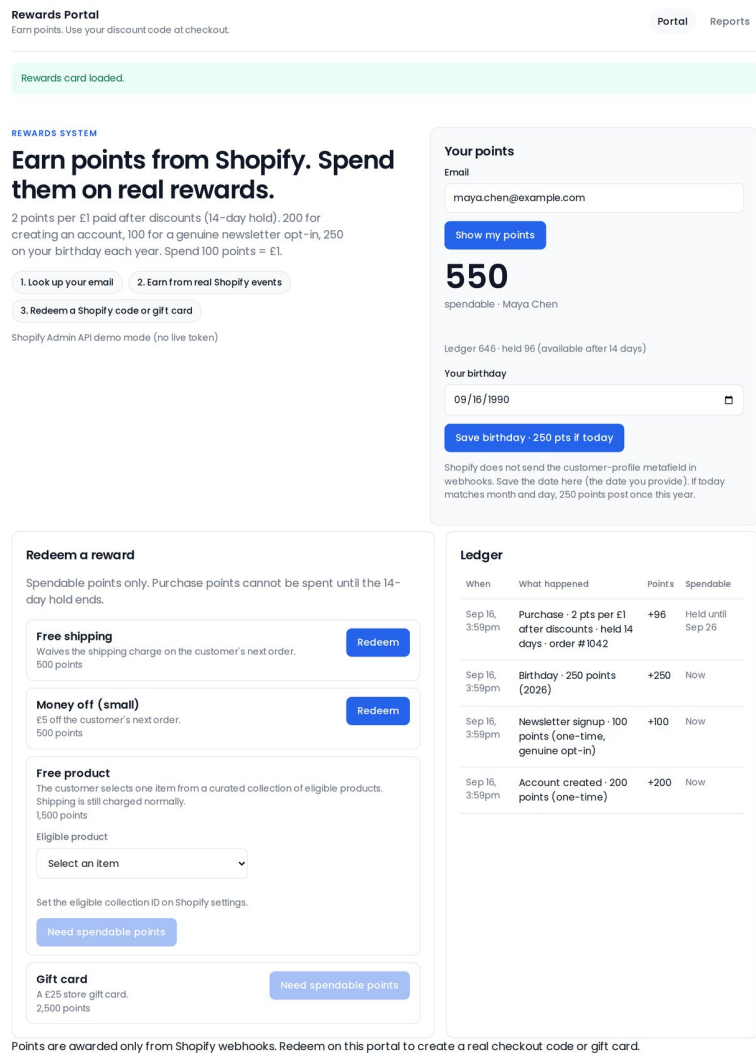

Reason

Ledger correction

Post correction

Every balance is the sum of ledger rows. Discount codes and gift cards are created in Shopify on redeem.

## Step 5 · Redeem a reward

Pick a reward they can afford. Copy the Shopify code from the success banner and use it at checkout.

# Step 6 · Checkout

Paste the code at Shopify checkout. One use only.

If redeem returns Invalid API key, fix Admin → Shopify settings and Test connection first.

Points are not taken until Shopify creates the discount or gift card.

GET /

Connect Shopify

No GraphQL account is required. GraphQL is Shopify's Admin API. Your custom app token is the login.

Create these Shopify webhooks (all of them)

Save URL and API token for each. Custom apps usually cannot register these via the API – add them in the app's Configuration / Webhooks screen, or Settings → Webhooks.

| # | Shopify event name                      | Topic                                    | Fields / action                                                                                                                                                                                  |
|---|-----------------------------------------|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Order payment                           | orders/paid                              | 2 points per €1 of other discounts, 14-day hold, then the order is paid.                                                                                                                         |
| 2 | Refund create                           | refunds/create                           | Reverses purchase points for the refunded amount.                                                                                                                                                |
| 3 | Customer creation                       | customers/create                         | 200 account points, once. Also 100 if they genuinely subscribe or signup.                                                                                                                        |
| 4 | Customer update                         | customers/update                         | 100 newsletter points on footer/theme signup (sig=newLetter) and on marketing consent. Birthday (Shopify) adds custom birthday (webhooks never include that metadata).                           |
| 5 | Customer email marketing consent update | customers_email_marketing_consent/update | 100 newsletter points when Shopify records a real subscribe. (Excluding Shopify forms / Email). Existing customers looking up the email on the Portal also needs marketing consent from Shopify. |

Clickbook URL (copy watch)

https://727.A.B.1.40202/api/webhooks/shopify

The above footer form must be Shopify's customer newsletter form (or Shopify form), not Matching Shopify. A new email on that form creates a customer with log newLetter. An existing customer email is not updated by that form – all email marketing is handled on the Shopify customer. Beware: all the same email on the Portal. Points are not awarded and no coupon is created until they redeem.

Birthday 250 points – skip Checkout Profile / CUI apps

Shopify's Customer Profile "Add Email" step skips unless you skip it (Customer Account ID extension. REST webhooks also send metadata, so doing correct. Customer Account ID extension sends email address unless you skip it (API token).

1. Emailset: Rewards Portal – enter the customer email – Save birthday. Use today's date to award 250 points immediately (once this calendar year).
2. Or Admin – Customers – that customer – Save birthday (some ledger).
3. Or pld birthday: save-as-is in the Shopify customer notes or tag, then save the customer – notes/tags aren't the webhook.
4. If custom birthday is already on the Shopify customer, look up that email on the Portal. This app reads the metadata with Admin GraphQL and awards it today matches.

Optional: matching calendar today day or today: Rewards award birthday today so stored dates still pay out on the morning of the birthday.

In Shopify Admin

1. Settings – Apps – Develop apps – Create an app
2. After new app's real details, go to Customer's real products with the accounts, with the API token
3. Install the app and copy the Admin API access token (next...)
4. Copy the API secret key (used to verify webhooks)
5. Use the API secret key in the app's settings – Develop apps – Develop apps – above custom app development – Create app – Admin API permissions including GraphQL and awards it today matches.
6. Public HTTPS URL must be the app's address, including https://. If that is in the browser bar

If redeem says invalid API key or access token (401)

Shopify is refusing the secret shop's token for the app. That is normal for a Shopify CUI Dev Dashboard app: those tokens expire, and there is no permanent token to copy. Webhooks are all all-time.

Option A (best if you used Shopify CUI Dev Dashboard – your app – Settings: Copy Client ID and Client secret. From there below (Access token can stay blank). The app must already be installed in your shop. shop connect, not Shopify, use Store View that connects).

Option B (store custom app) in the shop: Settings – Apps – Develop apps – above custom app development – Create app – Admin API permissions including GraphQL and awards it today matches – Install. Copy the Admin API access token immediately (shown once). Paste it below. Do not reuse a token from another app or shop.

If "Turn on order webhooks" says 401

That is normal for custom apps. Create the four webhooks in the table above by hand. Then mark a test order as paid.

Every balance is the sum of ledger rows. Discount codes and gift cards are created in Shopify on redeem.

Create the five webhook topics by hand. Same URL for each.

# Test connection

Domain: your-store.myshopify.com for the installed shop.

Dev Dashboard / CLI: Client ID + Client secret (shpat\_ tokens expire).

Custom app in this store: install, copy shpat\_ once, enable write\_discounts.

Save, Test connection, then redeem. Update database after Hostinger uploads if pages 500.

5. Use the \*.myshopify.com hostname from Settings → Domains, not meridianwellnesshub.com
6. Public HTTPS URL must be this app's address, including /public if that is in the browser bar

If redeem says invalid API key or access token (401)

Shopify is refusing the saved shpat\_ token for this shop. That is normal for a Shopify CU / Dev Dashboard app: those tokens expire, and there is no permanent token to copy. Webhooks can still add points.

Option A (best if you used Shopify CU): Dev Dashboard → your app → Settings. Copy Client ID and Client secret. Paste them below (Access token can stay blank). The app must already be installed on appare1-shop-ysekmza1.myshopify.com. Save, then Test connection.

Option B (store custom app): In this shop: Settings → Apps → Develop apps → allow custom app development → Create app → Admin API scopes including write\_discounts → Install. Copy the Admin API access token immediately (shown once). Paste it below. Do not reuse a token from another app or shop.

If “Turn on order webhooks” says 401

That is normal for custom apps. Create the four webhooks in the table above by hand. Then mark a test order as paid.
